Novum Organum: The Reckoning of Unattended Dialectics

Alexander Maslov

August 28, 2022

Abstract
This work is a philosophical investigation into the nature of dialectics, particularly as it relates to the human mind and the process of knowledge acquisition. It explores the limitations of traditional dialectical methods and proposes a new framework for understanding the relationship between the individual and the world. The central theme is the "reckoning" of unattended dialectics, which refers to the often-overlooked or under-theorized aspects of dialectical thought. The author argues that a comprehensive understanding of dialectics requires a focus on the practical, lived experience of the individual, rather than on abstract, theoretical constructs. This approach is grounded in a deep understanding of the human condition and the complexities of human existence. The work is organized into several sections, each of which addresses a different aspect of the dialectical process. The first section discusses the historical development of dialectics, from its roots in ancient Greek philosophy to its modern applications in various fields of study. The second section explores the relationship between dialectics and the human mind, arguing that dialectical thought is a fundamental aspect of human cognition. The third section discusses the practical implications of dialectical thought, particularly in the context of education and social justice. The final section offers a new framework for understanding dialectics, one that is grounded in the lived experience of the individual and that seeks to address the limitations of traditional dialectical methods. The author concludes by arguing that a comprehensive understanding of dialectics requires a focus on the practical, lived experience of the individual, rather than on abstract, theoretical constructs.
